

is made of plastic of high hardness and resistance, to be placed in the middle of the metal tubes with ribe to form part of the suspension system, with the purpose of indexing the tubes in the case of breeder or avoiding turning them in the case of broiler.

Features

- Made with 100% high-density virgin plastic and additives that provides a high resistance and durability.
- Design is ergonomic.
- Easy to install, since the piece has an opening area in the center so that the anti-perch cable can pass through and can be placed quickly.
- Easy cleaning and disinfection.

Benefits

- Breeder: It is placed in the metal tubes with rib to position the tubes depending on the length of the house so that all the animals eat the same amount at the same time due to the tubes are indexed.
- Broiler: It is placed in the metal tubes with rib to prevent turning.

To be used in:
