

Half-round type slide-out feed dispenser. Designed to be placed on the metal tubes of the feeding lines, right in the middle of the automatic chucks. Control the output of the food in a quick and practical way, just slide it to any side to open or close the perforation where the food comes out.

Features

- Manufactured with 100% virgin plastic and additives that give it high strength and durability.
- The piece fits any tube with diameters from 44mm to 45mm.
- The piece has 10 vertical structures that facilitate gripping and handling of the piece.
- Thanks to the structures at the ends, a tool designed by Sephnos® can be used to slide SLIDE MATE® without the need to bend down.
- Allows to control the output of food during the filling of the reception semi-automatic feeders.
- Mainly designed for filling the semi-automatic TURBOGROW 2S® receiving trough.

Benefits

- Automates the filling of the baby chick feeders “TURBOGROW LINE” or tray or paper mat.
- No longer required people to manually fill chick feeders.
- Avoid feed waste.
- Functional for all types of metal tube: smooth or with rib.
- Easy installation and handling.
- Quick washing and disinfection.

For use in:
