

TURBO TWIST FILLER®

Half-cane food dispenser whose external surface is of the stepped type, designed exclusively for its functionality, efficiency and ergonomics, to be placed in the metal tubes in the middle of the automatic plates of the feeding lines. To control the feed output, simply rotate it manually or using the Sepgnos-designed Shutter Lever.

Features

- Made with 100% virgin plastic, and additives that give it high strength and durability.
- Semicircular shank shape, staggered outer surface with the steps in transverse arrangement for a better grip and can be operated manually or with the use of a specialized tool. The piece has a central position indicator and with fins at its ends to avoid injuries or cuts in the fingers.
- It allows to control the exit of food during the filling of the feeders of reception, mainly for the filling of the rounded feeders of reception; TURBOGROW®, TURBOGROW SHALLOW, HIGROW and to a lesser extent for the filling of elongated feeders; TURBOGROW 2® and TURBOGROW 2S.

Benefits

- Automates the filling of feeders.
- Significantly reduces the filling time.
- Avoid food waste.
- It fits perfectly to metal tubes.
- Easy installation and handling.
- Fast washing and disinfection.
- Due to its design, it facilitates handling, avoiding back pain and physical exertion due to continuous bending over.

For use in:

Shutter Lever

Tool that allows you to position the dispenser in an open or closed mode comfortably and with little effort.
